## Physician Provider Letter for Inclusion as Primary Care Case Managers

---

STATE OF OKLAHOMA

OKLAHOMA HEALTH CARE AUTHORITY

OHCA-MC-95-01

September 27, 1995

Dear Physician Provider:

I am writing to make you aware of some significant changes in the Medicaid program. These changes will limit the ability of physicians outside four primary care disciplines--general practice, family medicine, general intern medicine and general pediatrics--to deliver primary care services to Medicaid clients. In addition to providing information to you about the program changes, this letter includes an application in which you can request inclusion in the program as a primary care provider.

As you may know, the Oklahoma Medicaid program is currently in the process of conversion from the traditional fee-for-service system to a managed care system. In areas of the State outside the Oklahoma City and Tulsa metropolitan areas and Comanche County, clients will be served through a system of primary care physician case management. In this system, primary care physicians serving Medicaid clients will receive capitated rates to deliver primary care office services, case management and a limited number of laboratory and x-ray services which are commonly performed during office visits (refer to attachment). Case management will include referrals for all specialty care except eye services, dental care, obstetrical services and mental health and substance abuse services. Services not included in the PCCM contract and not otherwise excluded from prior authorization requirements will be paid under the fee for service system. Capitation rates are currently being calculated by actuaries under contract to the State. They will be available to providers prior to execution of contracts.

Contingent upon approval of the State's federal application to establish this system effective March 1, 1996, all Medicaid clients in Hughes, Okfuskee and Seminole counties will be required to receive their primary care services through the primary care physician case management system. Clients will be given an opportunity to select a physician from a list of providers participating in the program. If they do not select a physician, one will be assigned to them.

The four groups of primary care physicians described above will automatically be eligible to be providers under the program if they

have executed primary care case management contracts to do **so** with the Oklahoma Health Care Authority. In very limited circumstances, the agency's regulations permit physicians practicing in other specialties, upon application to the Authority, to participate as primary care case managers.

Factors to be considered by the Authority in approving applications are: (1) the percentage of the specialist's practice devoted to the delivery of comprehensive, continuous, first, contact primary care; (2) the willingness of the provider to accept new primary care patients; (3) the number of physicians in the four primary care areas who practice in the location where the specialist has a practice, relative to the number of Medicaid clients in that location; (4) the specialist's post-medical school training, including all primary care training; and, (5) the physician's historical experience in providing primary care services to the Medicaid population.

In order to be considered, **this application must be received at the Oklahoma Health Care Authority by October 16, 1995.** Returning this application does not obligate you to provide services to Medicaid clients in the new program. If the application is approved, a contract will be mailed to you along with the capitation rates. Your obligation to serve clients will begin only after the contract is executed by you and returned to the Authority.

If you have any questions, please contact Trevlyn Terry (405) 530-3488 or Terry Dalton (405) 530-3486.

Sincerely,

Garth L. Splinter, M.D.  
Chief Executive Officer
